

# PS Boost

PROTEIN • PERFORMANCE • POTENTIAL

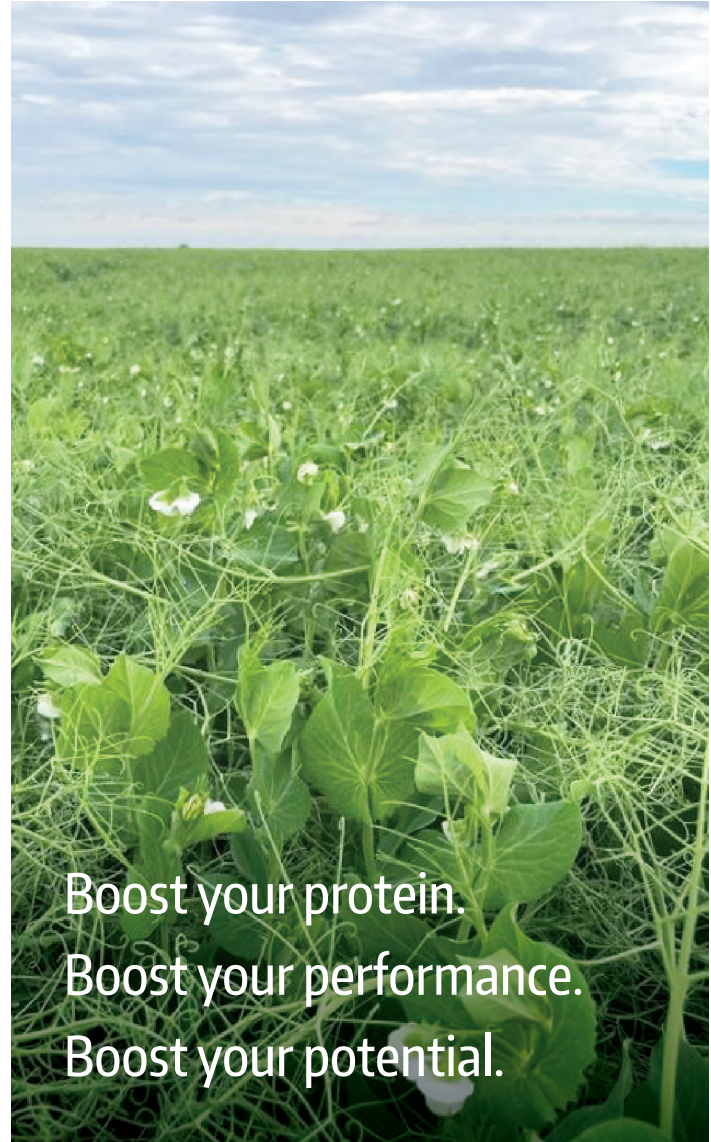

Pitura Seeds is proud to introduce the next high protein yellow pea - PS Boost - to our customers. This is the first variety that will be owned and marketed by Pitura Seeds, and we are excited to deliver new opportunities and profit potential to farmers through our relationships with end use processors in the protein market.

### VARIETY HIGHLIGHTS:

- High yielding
- High protein
- Very good resistance to seed coat breakage
- Early maturity
- Medium vine length
- Good lodging resistance
- Very good resistance to powdery mildew
- Good resistance to fusarium wilt

As we bring this variety to market, we are looking for new seed production partners to multiply PS Boost in the 2024 growing season and to distribute it to producers in 2025 and beyond. **If you are interested in becoming a Pitura Seeds seed production partner talk to us today.**

### 2022 Variety Information

VARIETY	YIELD % CHECK	SITE YEARS TESTED	AVERAGE PROTEIN/VARIETY	RELATIVE MATURITY	RELATIVE VINE LENGTH	SEED SIZE (TKW)	RESISTANCE LEVEL TO:
